

Aeration Systems

EasyPro aeration systems are a great way to aerate, destratify and circulate water in ponds and watergardens. Our high quality aerators are ideal for both summer aeration and winter deicing. These units are powered by quiet, continuous duty compressors that only cost pennies a day to operate!

The increased oxygen levels and circulation provided by aeration has a positive effect on ponds year-round, from preventing fish kills in the winter to helping reduce algae, sediment and odor in the summer. Our compressors are reliable with few moving parts making them less likely to need repair. Use for winter deicing to save money over standard heaters or deicers. Kits come complete with compressor, tubing and diffuser. If your aeration demands are beyond that of a standard kit, EasyPro has options to aerate nearly any size pond or lake.

Aeration Systems

Ornamental Pond Aeration/Deicer Systems

Up to 800 gallon ponds

Ideal for both summer aeration and winter deicing in ponds up to 4' deep. Powered by quiet, continuous duty, 115v compressor with one year warranty.

- Ensures adequate oxygen levels during hot summer months
- Maintains open water during winter months in freezing climates eliminating winter kill
- An energy efficient way to aerate, destratify and circulate water in water gardens and koi ponds

Economy Linear Aeration Systems

1,000 to 8,000 gallons ponds

Linear diaphragm aeration kits include weather proof compressors allowing use outdoors without further protection. These midrange aerators do a great job of aerating ponds up to 6' deep all year long. A great value with a two year warranty!

- Reliable — linear compressors have few moving parts making them less likely to need repair
- Increased oxygen levels, which will help with decomposing organic matter

Deluxe Linear Aeration Systems

1,500 to 20,000 gallon ponds

These linear piston aeration systems are the finest systems on the market. They offer an unrivaled three year warranty. Very reliable motors can aerate large watergardens, often continuously, for five to eight years with little maintenance.

- Super quiet — barely audible from 5' away
- Energy efficient — operates for pennies a day
- Oil-less design provides clean, dry air with minimal maintenance
- Easy to install — compressors sit on shore connected by tubing to bottom mounted air diffusers
