

Waterfall Spillways

Experiencing the sights and sounds of cascading water in a landscape is made simple with the diverse line of spillways available from EasyPro. Whether a formal waterfall or a more natural, meandering stream is desired, EasyPro spillways help take waterfall building to a new level!

The wide selection of spillways from EasyPro offer the perfect choice for Just-A-Falls systems, hardscape areas, signs, ponds, swimming pools or other installations where a waterfall is needed. The selection of EasyPro spillways are unparalleled in innovation and offer the best choices on the market today!

Waterfall Spillways

Waterfall Spillway Features:

ECO-Series® The Eco-Series line of waterfall spillways possesses the simplest features of any spillway on the market.

Eco-Series Universal Waterfall Diffuser

The Universal Waterfall Diffuser is a fast and easy way to create professional looking waterfalls.

- Dual 2" side inlets pre-installed for maximum versatility, fast install and use in multiples
- Vertical rib design internally diffuses water and provides incredible strength
- Compact size allows for easy concealment (3 1/2" tall x 23" wide x 14" deep)
- Can be combined with copper attachments for amazing formal display

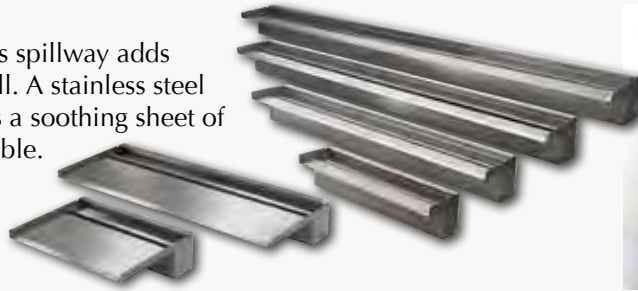

Eco-Series Spillways

Using the patented "Spliner Lock" system the liner is attached to the spillway – no silicone, no bolts, no tools! The tool free installation of the Eco-Series one-piece waterfall spillway makes this the easiest to install spillway on the market.

Vianti Falls Spillways

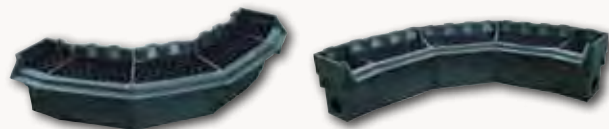

With simple elegance the Vianti Falls spillway adds the beauty of water to any block wall. A stainless steel spillway with internal baffles creates a soothing sheet of water. A variety of models are available. Stock units are available with standard or extended lips and multiple lengths. Custom units can be designed and manufactured.

Pro-Series Spillways

Large waterfall features are made simple with the EasyPro Pro-Series expandable waterfall spillway. Use this patented system to create show stopping waterfalls. By selecting the number and type of extension modules the expandable spillway is bolted together to form the headwater of virtually any size waterfall. Inward, outward or straight modules are used to create concave, convex or "S" shaped waterfalls. Designed to sit inside the liner, the EasyPro expandable spillway eliminates concerns of leaking. Once installed these spillways are hidden from view by rock. The Pro-Series expandable spillways from EasyPro are the toughest and most versatile system available.
