

Ground Mount Cabinet Assembly

Thank you for your purchase of the EasyPro SC18 ground cabinet. Ideal for housing aeration compressors, this steel cabinet is designed to mount to an 18" x 11³/₈" base. The cabinet must sit on the base 2" above grade to ensure adequate ventilation. Keep grass, shrubbery or other obstructions from blocking the air vents on the cabinet.

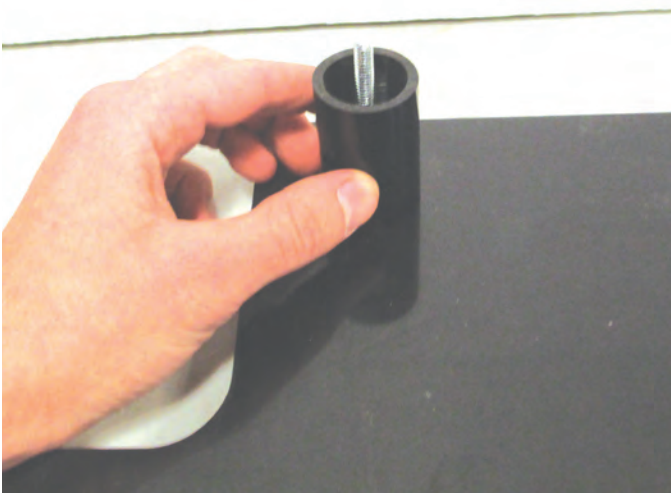

Mounting SC18 cabinet to base:

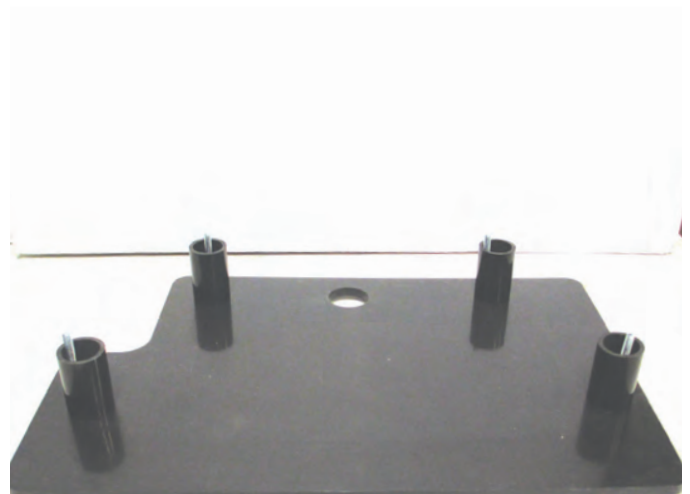

1. Determine location to install cabinet. Ensure that ground is flat, level and clear of possible obstructions.

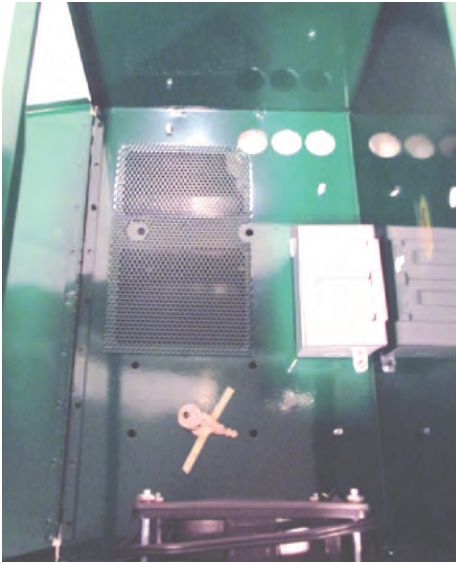

2. Install the four bolts and washers from the bottom of the base.

3. Place the spacer blocks over top of each bolt.

4. Orient the cabinet with the base so that the tubing outlet holes align with the notch in the base.

5. Carefully mount the cabinet on the four bolts. A second person may be needed to support the cabinet during this step.

6. Install the top washers and locknuts inside the cabinet. Tighten with a Phillips screwdriver and a $\frac{7}{16}$ " wrench or socket.

Cabinet is now installed.
Follow aeration kit instructions
to properly install compressor,
tubing and diffusers.
