

Barley Straw Bales

EBS • EBS1

Features

EasyPro's family of water treatment products is designed to work together to achieve the natural ecological balance your pond needs to maintain clean, clear water.

Naturally occurring organisms will decompose the lignins in the barley releasing humic substances into the water. With exposure to sunlight and oxygen the compounds are converted into low levels of hydrogen peroxide, modifying your pond's chemistry and improving water quality.

- Best results if applied early season
- Safe for use with aquatic life and pets
- Keeps water clean and clear
- Includes mesh bag for easy application
- Maintains a healthy, balanced ecosystem and reduces pond maintenance
- For best results use with EasyPro All Season Bacteria

One bale lasts about 3 months

Directions for Use

For maintenance applications or new ponds:

- One EBS bale treats approximately 500 gallons of pond water
- One EBS1 bale treats approximately 1000 gallons of pond water
- Bale lasts three - four months, apply second bale four weeks after first treatment to avoid interruption in water quality

KEEP OUT OF REACH OF CHILDREN

Safe for fish & aquatic life

When to Use

- To increase water clarity naturally
- Spring and summer, monthly
