

## Features

EasyPro's family of water treatment products is designed to work together to achieve the natural ecological balance your pond needs to maintain clean, clear water.

Many factors in a pond affect the water's pH, such as fish food and decaying plant material. When determining whether or not to increase (or decrease) pH, always track the water's pH over several days by measuring the pH at 8:00 a.m., 1:00 p.m. and 6 p.m. Failure to determine the natural fluctuations in your pond's pH may result in an unnecessary and possibly dangerous altering of the pH. Most ponds will fluctuate widely, and naturally, during a 24 hour period. Attempting to alter this natural, daily fluctuation may be harmful to aquatic life. Keep written records of all pH readings and the time of day each reading was taken. Be sure to use reliable pH test kits.

- Safe, effective way to control pH
- Treats fresh water and salt water
- Phosphate free
- Maintains a healthy, balanced ecosystem and reduces pond maintenance
- Safe for use around fish, plants and pets

1 fl. oz. per  
600 gallons

## Directions for Use

***This formulation will increase pH in pond water:***

- Water Gardens & Koi Ponds: Apply 1 fl. oz. per 600 gallons of water

To increase the pH 1/10 of a point (i.e. 6.1 to 6.2) add 1 fl. oz. per 600 gallons of water. Allow water to circulate for a minimum of 30 minutes then retest. Redose as needed to get the pond water to the desired pH.

This is not a medication, chemotherapeutic agent or economic poison, store between 60° F - 100° F

This formulation is compatible with most water conditioners and antibiotics

**WARNING:** HARMFUL IF SWALLOWED. CAUSES SKIN AND SERIOUS EYE IRRITATION.

Contains Sodium Sesquicarbonate.

Do not swallow. Wash skin thoroughly after handling, Wear eye protection.

**FIRST AID** – If swallowed do not induce vomiting. Rinse mouth with water and drink water. Never give anything by mouth to an unconscious person. Consult a physician.
